Work Experience

May 2017 - Present

Associate Director of IT, Infrastructure | Gateway Church

I currently manage a team of 5 that have a combined IT experience of over 50 years. We manage all staff-facing infrastructure: network, phones, servers, applications, and SAAS products. Many of the current infrastructure solutions have been implemented under my leadership.

October 2014 - May 2017

Associate Director of IT, Networking | Gateway Church

Prior to a season of restructuring at Gateway Church, I oversaw the network team. We managed network security, wired and wireless network connectivity, collaboration and voice solutions. We used Cisco equipment almost exclusively and implemented countless solutions to grow the multimillion dollar network into its current state.

November 2013 - October 2014

Cisco Network Engineer, Information Technology | Gateway Church

Over my short period of me serving as a Network Engineer I had to rapidly grow in my knowledge regarding all of Cisco's product lines. I became proficient in IOS, IOS XE, ASA OS, and NXOS. I would not trade this experience for anything.

October 2011 - November 2013

Helpdesk, System Administrator & Helpdesk Manager | Gateway Church

After getting out of the service, I returned to IT in the first position I found, a helpdesk technician at Gateway Church. Over my first two years back in the industry I worked my way from helpdesk position to helpdesk position, then to systems administrator; finally, to a management position over the helpdesk team. I have always found that customer service is key to any position. Regardless of where you are serving, you always have a "customer." I enjoyed passing this mentality on to the team.

February 2008 - August 2011

Infantry Team Leader, IIB | United States Army

For the majority of a three-year enlistment, I served faithfully as part of the Big Red One in Fort Riley, Kansas. The responsibility, camaraderie, perseverance and hair style will forever be a part of what makes me.
